

# Cross sector collaboration for community resilience

**Lucy Palmer**

Health Specialist

Mott MacDonald

No one likes siloes.....

---

But **how** do we work cross-sectorally?

**1. Make services  
people-centred - focus  
on beneficiaries and  
their experiences**

## With a focus on parents and families, a holistic approach becomes intuitive:

Empowering  
for families,  
especially  
women

Focus on inter-  
linked barriers  
to adopting  
optimal  
behaviours

Respects care-  
givers' time  
constraints

Efficiently  
maximises  
investments  
across sectors

# School Readiness programme in Tanzania

**2. Communicate** – more  
than you think – and **listen!**

**“Listen with an intention  
to understand rather  
than an intention to  
respond”**

**3. Support roll out  
of what is already  
there**

# Creating Linkages across Programmes at Community Level

We will link SRP with **existing** initiatives to target the younger age group to build foundations for future learning:

- Ministry of Community Development's Parenting manual and PoA on Violence
- Nutrition Package
- TVLA and poultry vaccination
- Care for Child Development

Packages already exist – we can help expand the rollout and learn lessons on how to integrate

## Joined-up thinking on ECD

The barriers to early childhood development are usually connected.

Poor water and sanitation lead to health problems, while malnutrition stunts growth, affecting education and hampering future economic development. Insecurity can undermine and compound them all. Often, the response to these challenges is to separate them by sector, rather than integrate them into a practical 'bundle' of nurturing care.

We're championing a multisectoral approach that identifies collaborative ways to strengthen ECD programmes. As an organisation with a track record of technical expertise, combined with a local presence, we encourage our teams to connect their thinking and improve the standard of living for mothers and children during this critical stage of development.

**Opening Opportunities with Connected Thinking**

Thank you
